

Reading the code on a cell

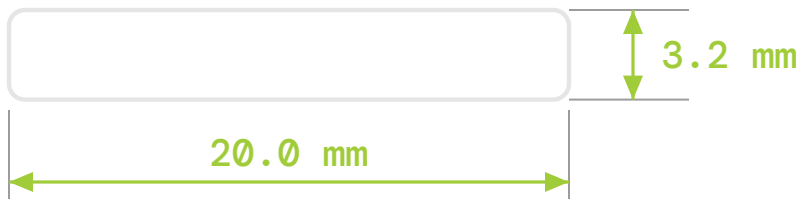

The lithium coin code carries the size. The button code beside it is usually a catalog entry.

Four digits, read two and two.

The same two numbers, on the cell

Cross section, drawn to scale at 14 px per mm.

The code and the object carry the same two numbers. Both figures come from the Energizer datasheet.

The same cell, under two codes

One is a catalog entry. The other is dimensional.

catalog number

LR44

Catalog entry 44, not 4 mm by 4.4 mm.

The can measures 11.60 by 5.40 mm, as manufactured.

dimensional code

LR1154

Reads 11 and 54: at least 11 mm, 5.4 mm high.

Same can. Diameter is truncated; height is exact.
